A new and convenient protective for small they are thick; the joks when whisked attusions of the skin is suggested by an Engalone will be as thick as tatter. The whites, lish chemis. It is prepared by mixing equal when teaten by themselves, should be dry parts by weight of camphor and absolute lighter Find, the result of a collection from and frothy, and appear full of small white alcohol, and dissolving gun cotton in this grains. For most cakes the fine white pul- sciution in the proportion of one part to much more closely than they do spiders. forty. When applied to the skin it raildly antinne of the antiare represented by the The flour should always be sitted, as it dries and yields an elastic film, which is an two front feet, and they even imitate to the flour should always be sitted, as it dries and yields an elastic film, which is an excellent substitute for ordinary collection. Never warm Lutter in the pan it is to be As a convenient protective it is likely to of the less perfectly disguised spiders.

superside sticking-plaster, as the skin fil case heavy. If the weather is cold let the formed is not musightly, does not presery better stand in the warm betchen some time, awkward corners mable to catch, and is not

At the Honley Regatto.

At the recent Honley Regatta the English dresses, and the collection of well-costumed

f the todats are shown here. They give an idea of what fashionable London affects for outdoor wear at this sesson. The mannish garb so prevalent here is, it is seen, in vogue across the pond.

White Hair Turning Black.

A Detroit woman originally had black eyes is no doubt about the change, nor was any artificial means used to produce it, so that the case is certainly one of the most remark. able recorded in the annals of medical his tory. The lady was not conscious of any change in dict or in her physical condition that would justify the curious phenomenon t is absolutely unexplainable on any known hypothesis.

these insufferably hot days. Perhaps it would be more strictly accurate if it were designated the rise of the Summer umbrella: for the most practical article of that description is one equally adaptable to sun or rain. It has a light stick bandle and is in a shade of light blue or dark green -for this in a Sum mer when it rains as unexpertedly as the sun shines flercely. There is no adjunct of latter-day costume that is a greater boon than the Summer umbrella.

The Summer Umbrella.

Its Artistic Source. The Virot matinee hat pictured in Monday's EVENING WORLD Was originally illustrated in Harper's Bazar, and credit should have been given that artistic publication when Tar EVENING WORLD'S reproduction appeared. Omission of the credit was an accident. Then was no intention to slight the source of the picture, for Harper's Bazar and its high class art work are too well and widely known t make it possible for any of its illustrations to

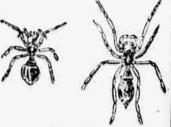

Insects That Are Actors. One of the most wonderful facts in nature is the minicry of plants and arimals, or i resemblance which certain species bear to other and very different species as an aid t their struggle for existence, either by con-

There is a very common locust, which often found in dusty roads, and which is quite conspicuous while trying; but the moment Mrs. Charles Waldo Richards, an American Indistinguishable from the dust and dirt in

> The caterpillar of the Dicranua vinuli ous a curious example of mimiery. The unper ngure shows the animal in a state of remove; but when disturbed it puffs up US head which is surrounded by a red border with two black spece resembling eyes-1909 the shape shown in the lower figure. The general effect is to apparently transform the "Checks vater, litar into a terrorious looking to . - trate animal, and thus effectually frighten away any birds or other animais which might otherwise destroy it.
